Auto rotisseries are Joel Johnson's specialty. His company, Accessible Systems, has been making them for 16 years. Look for his booth at the next car show you attend. Johnson sets up his competitors' rotisseries next to his *Bottoms Up Lift* to demonstrate how design differences translate into his rotisseries' superior performance.

Located in Johnson City, Tennessee, Accessible Systems offers an impressive variety of auto restoration tools, ranging from Tireskates to door braces. The full catalogue of products can be viewed online at <http://www.accessiblesystems.com>.

At its site, the company offers a close look at its product line, with specs and photographs of its axle dollies, body carts, and frame flippers.

Don't leave the site without looking at the photos explaining Johnson's method for testing casters. Take a moment to look over their 5-year guarantee of tire skates, the company's bread and butter.

Accessible Systems has become so comfortable in their production of tire skates that they now offer custom models for builders tackling non-traditional projects. For those working on regular projects, they offer three varieties of casters and weight capacities ranging from 6,000 to 10,000 pounds.

Not bad for a backyard company that grew out of Joel Johnson's dedication to relieving difficulties that car builders face on a day-to-day basis. Accessible Systems offers tools, durable and guaranteed, to protect against those delays that can derail a project from reaching its completion.
